1. Informant observed a glare in the sky at 2145 hours EET on 9 or 10 July 1953. The object flew exactly from south to north. The projectile took from four to eight seconds to cover the distance between points A and C (see sketch). 25X1
2. Informant felt a wave-like vibration before he heard the noise of the flying projectile. The noise was a loud roar while the projectile was in sight and then decreased. Vibrations of the earth were still felt even after the noise was no longer heard. Finally, a dull sound similar to the detonation of a bomb was heard at a distance of about 50 kilometers. 25X1
